

Afonso Caboz

Full-Stack Solutions Architect | ERASMUS+ Candidate

Faro, Portugal • afonso.caboz@gmail.com • linkedin.com/in/afonsocaboz • github.com/CodeZobac

"Code is a liability. A solution is an asset."

My guiding principle is to write the least amount of code necessary to create the most value.

PROFESSIONAL SUMMARY

Full-stack solutions architect with an obsessive focus on solving business problems through technology. My approach is language-agnostic and problem-centered, with proven experience building and deploying scalable applications, from infrastructure as code (IaC) to the final user experience.

With formal training in Web Programming, my true passion lies in translating concepts into functional, high-impact products. I operate from the infrastructure layer (Terraform, Docker) through robust backends to intuitive frontend experiences. I am now seeking a challenging ERASMUS+ internship to apply my end-to-end product-building mindset in a dynamic, international environment.

TECH STACK

Frontend

React

Next.js

Vue.js

TypeScript

JavaScript (ES6+)

HTML5

CSS3/Sass

Backend

Python

FastAPI

Node.js

Databases

PostgreSQL

MongoDB

SQL

Infrastructure & DevOps

Docker

Terraform (IaC)

AWS

Kubernetes

Git

SELECTED PROJECTS PORTFOLIO

Gyst - Your AI-Powered Knowledge Brain

AI-Native Knowledge Management Platform

An AI-native knowledge management platform that transforms static documents into a dynamic, conversational knowledge network for teams.

Contribution and Architecture Decisions:

- Architecture and implementation of an agentic system with CrewAI for intelligent document analysis and tagging
- Development of a RAG (Retrieval-Augmented Generation) pipeline for accurate conversational search
- Built a robust API with FastAPI and reactive frontend with Next.js

This project was a deep dive into building agentic AI systems, proving that complex knowledge management can be made intuitive through a well-architected RAG pipeline.

Tech Stack: Next.js • FastAPI • TypeScript • CrewAI • RAG • NLP • PostgreSQL • Docker

ETIC Resource Hub

Centralized Resource Management Platform

A full-stack web application architected from the ground up to streamline and centralize the management of ETIC Algarve's creative resources, from equipment to studios.

Contribution and Architecture Decisions:

- As the sole developer, made the strategic decision to rebuild the system on a modern, scalable foundation rather than refactor legacy code, ensuring long-term value for the institution
- Designed and implemented the entire system, from the PostgreSQL database schema and the robust backend API to the intuitive frontend for students and staff
- Delivered a fully functional MVP in under two weeks, demonstrating an extreme capacity for rapid, high-impact development and end-to-end project ownership

This project was a masterclass in pragmatic execution, proving that a single, focused architect can deliver immense value by taking full ownership of a business problem.

Tech Stack: Next.js • Terraform • Supabase • Docker

Cyber Compass

Digital Ethics Educational Platform

An educational platform focused on teaching digital ethics through interactive dilemmas and simulations.

Contribution and Architecture Decisions:

- Created a branching scenario system for ethical simulations
- Backend development to manage user progress and analyze decision patterns

This platform was a fascinating exercise in user psychology, architecting a system that not only teaches but also analyzes the user's ethical decision-making process.

Tech Stack: React • Python (FastAPI) • MongoDB • Docker

PROFESSIONAL EXPERIENCE AND INTERPERSONAL SKILLS

High-Volume Hospitality Roles

Various Establishments, Faro | 2020-2023

- **Direct Client Interface and Expectation Management:**

Responsible for client experience in high-pressure environments, solving problems in real-time to ensure satisfaction and retention. This direct experience with the "end user" informs my product-centered approach.

- **Coordinated Execution and Resilience Under Pressure:**

Synchronized operations with teams to ensure smooth service during demand peaks. Developed high stress tolerance and ability to maintain execution excellence when systems are at their limit.

- **Emotional Intelligence and Adaptive Communication:**

Reading and managing team dynamics and client needs to adapt communication, prevent conflicts, and ensure a collaborative environment.

EDUCATION

Technical Specialization Course in Information Systems Programming

Level 5 | ETIC Algarve, Faro | 2025

Seeking to connect with a visionary team where I can contribute to and learn from a world-class engineering culture.
